

At Your Command

1:1 Torque Facilitates Optimum Tip Steerability

TRAVERSE CHALLENGES WITH CONFIDENCE

Offering excellent wire handling and flexibility without compromising support, the TORX transitionless guidewire transmits 1:1 torque to advance through complex anatomy and deliver in difficult cases. Designed to become your go-to wire, TORX responds to your command.

Product Specifications

Traverse Challenging Anatomy

- Navigate successfully in peripheral and coronary procedures
- Transitionless construction enables trackability and crossability in narrow locations
- Nitinol core provides kink resistance for multiple uses in a single procedure
- Silicone coating aids in negotiating tortuous vessels
- Unique, atraumatic tip designs minimize injury

Confident Placement

- Gold guidewire tip provides enhanced radiopacity

Range of Configurations for Procedural Success

- Varying levels of diameter stiffness and support
- Range of lengths for many procedural applications
- Multiple tip taper lengths and angles for a range of tip floppiness

“

The floppy tip of the wire helps guide through narrowings.

*Marriah Russell RT(R),
Wellstar Cobb Hospital, VI*

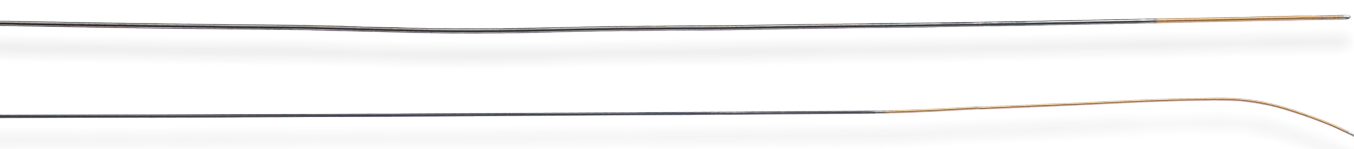

”

“

I really like the TORX wire because of the kink-resistant nitinol and torqueability. The wire is able to make turns and keep the stiffness that we need for different procedures.

*Sean Wiley, RRA/RPA,
UF Health Shands Hospital IR, Mobile Vascular Solutions*
